Douglas College

February, 2020

Diploma, Computing Studies & Information Systems

Overall GPA: 75%

Relevant Courses:

Data Structures & Algorithm (79%), Multimedia Web Development (94%), Mobile Application Development (84%), Relational DBMS (70%)

Course Technical Projects

EasyMeals Web Application Project

September – December 2019

- Developed a simple web application that provide users with information regarding food recipes through an established API and save them to a personalized list of recipes with MongoDB
- Designed the user interfaces of the website that displays different food recipes and how to save the recipes to a personal list using JavaScript and JQuery
- Implemented client-side logics that handles information retrieval through APIs

RemoteCart Mobile App

January – April 2019

- Developed an android application with Android Studio that lets users search for supermarkets near their location by connecting to Google Maps API and see available sales on items.
- Designed various XML user interfaces including login and account management, location and product display as well as checkout screen using Java
- Identified and investigated possible users' needs and common behaviors in order to better implement the interfaces and provide adequate user experience
